## Manhattan T2-R v1.12 Release Notes (24/06/20)

The following changes are since the last public release, v1.07, made on 04/09/19. A v1.09 release was made more recently for production and your T2-R may have this version if it was purchased recently. Where an issue was resolved in v1.09 it is noted below.

### Improved

- Manhattan menus can now be used when using interactive services with video, like 211 Ketchup TV and 265 Planet Knowledge. Previously you needed to exit the service or change the channel first. **(1.09)**
- During initial setup the Confirm Your PIN step has been updated to make it clearer you need to re-enter your PIN. **(1.09)**
- The system can now be restarted in the System Settings menu and by pressing: Red - 0 - Red - Standby.

### Resolved

- When recordings were sorted alphabetically and you played an episode in a series folder the sort would unexpectedly change to reverse date order. **(1.09)**
- Black bars could be shown on either side of programmes on BBC One SD. **(1.09)**
- After watching a recording of a live programme (chase playback) to the end, when next using live pause, it could freeze and then fail to respond until a restart.
- Playback of an already recorded programme could unexpectedly exit when there was a dynamic change in the transmission of an in-progress recording (e.g. audio or subtitles) and that recording then ends.
- Programmes deleted and emptied from the Trash could not be re-recorded and any repeats were indicated as already recorded.
- When retune events were signalled by the broadcasters you could be prompted to retune more frequently than necessary.
- When making a regional selection during Installation, the wrong regional services could be selected.
- The AD icon was not shown for programmes on ITV with AD.
